

## ABSTRACT

A wheel assembly for a shoe. A housing is attached to a heel portion of the shoe and defined with an opening. A wheel  
5 section is mounted to the housing in a manner such that a pair  
of wheels of the wheel section can be moved between an  
operating position in which they are received in the opening of  
the housing to be partially exposed out of a lower surface of  
the housing and a non-operating position in which they are  
10 taken out of the opening of the housing to be seated on a rear  
end portion of the shoe. The wheel section includes the pair  
of wheels, a shaft for supporting the pair of wheels, and a  
support bracket having one end which is connected to the shaft  
and the other end which is connected to the shoe by a hinge  
15 pin.
